1

Oct 94, Maj Gen McCarthy signed a letter to MAJCOM CEs asking support with correcting an imbalance with civilian and military fire protection management positions. Military personnel need to be afforded the opportunity to acquire leadership and emergency command skills necessary to support the wartime mission.

Subsequently the manpower standard was changed to establish that at least 50% of these management positions (Fire Chief, Asst Chief Readiness and Logistics, Asst Chiefs for Operations, and Station Chiefs) should be designated as military positions.

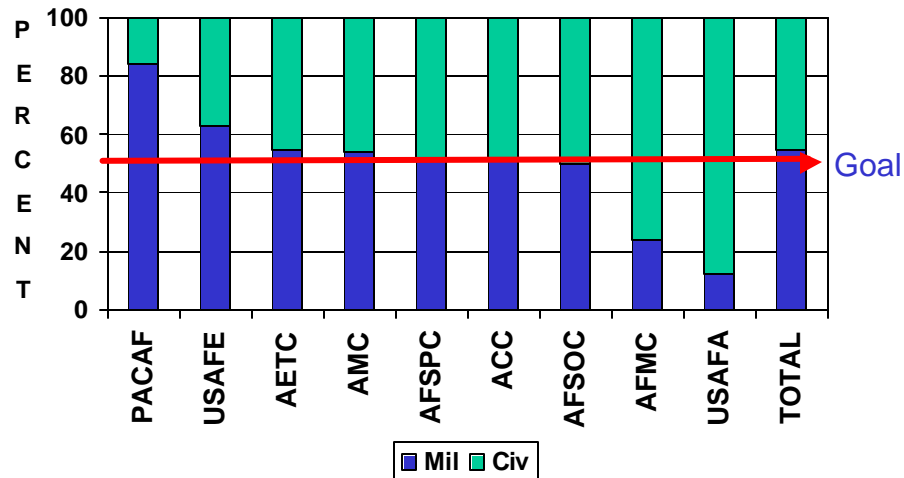

MAJCOMs and Fire Protection Flights developed plans to convert positions to achieve the proper balance of military/civilian management positions.

Current status indicated that we have achieved our overall goal, although some commands that are predominately civilian will have a higher percentage of civilian management positions.
